

Velox Strategy Guide

↓ : counters

There are various strategies in Bellum Regis that provide different advantages in different situations. However, most can be broken down to either aggressive, defensive or economic approaches. The instructions below are meant as guard rails to help you with decision making. Feel free to diverge from the guide as your situation requires.

Economic

Go for an economic approach early in order to set you up for the later stages of the game with a strong production backbone. The economic approach is easier when the enemy is far away or goes for an economic approach as well. If you are being attacked, consider switching into a defensive approach by starting to build defensive buildings and recruiting counter units.

	Villagers	Recruit villagers in the towncenter to expand your economy.
	Production Buildings	Build production buildings to strengthen your economy even more.
	Market	Research technologies in the market to solidify the production lead.
	Wonder	If you are not being attacked, consider progressing into the imperial age to build a wonder.

Aggressive

Go for an aggressive approach to punish another player that went for an economic approach or to keep the fight away from your home base. Killing units and destroying buildings is very lucrative and can cause the enemy to over-react. If you are not able to inflict damage on your enemies, consider switching into an economic approach to catch up in production.

	Academies	Build one or more academies to recruit lots of army and upgrade your units.
		Recruit military units that best suit your situation and attack your enemy.
	Blacksmith	Build a blacksmith and research military technologies to strengthen your troops.
	Castle	Build a castle close to your enemy to deny area or deal the final blow. Recruit trebuchets in imperial age.

Defensive

Play defensively when you are being attacked by the enemy. Defend yourself with towers, town-centers and castles and recruit counter units in the academy. After defending the enemies push successfully, a defensive approach can be shifted into an aggressive approach by sending the remaining troops forward and building forward buildings to claim more map space.

	Towers	Build towers to secure map space and valuable resources.
	Blacksmith and Market	Try to keep up with technologies. They will help you in the long run.
	Production Buildings	Go sure to build enough production buildings in secure areas of your map.
	Castle	Build a castle in your base to deter enemy armies. Defend with knights if your enemy attacks with siege.
